

## How to create the NEW API Keys of ProBotTrading

You need to log into your account on the [ByBit](#) website. This task is not possible on the mobile app. FOLLOW THE SCREENSHOTS

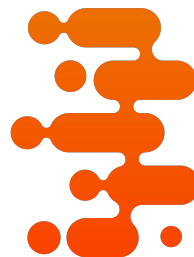

**(Please check our webpage: <https://thebitcoinfamily.com/bitcoin-family-pro-bot/> for all the requirements! Thank you.)**

**(It's important you create a completely new bybit account with the following affiliate link: <https://bit.ly/ProBotTBF> you may need to logout and clear cache before!)**

**(Make sure that the funds are available in the derivative account when you submit the form. From sending the form it takes 24-48h until the bot is online.)**

**(For a 2nd bot you DO NOT NEED to use a bybit subaccount, the additional funds needs to be in the corresponding derivatives wallet of the same account as the first bot.)**

2: On the top right you will find the option "Create New Key"

## API Key

Bybit provides clients with the most powerful, industry-leading API functionalities. You can use API to check market data, process automated trading orders and much more. See API Documentation page for more details.

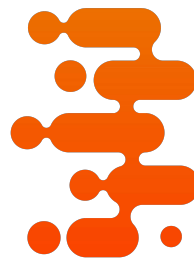

Each account can have up to 20 keys.

**For security reasons, please do not reveal your key(s) to non-trusted third parties.** We recommend that users add their IP addresses to each of the API key. A maximum of four (4) IP addresses can be added to each key. To add multiple IP addresses, enter them separately with commas in between. e.g. 192.168.1.1,192.168.1.2,192.168.1.3

**After changing your login password, please set up new API key(s), as the old one will expire within seven (7) days.**

**For the safety of your assets, your API secret key will only appear once upon creation, and hidden afterwards. Please keep your API keys securely.**

## My Key

3: Select following options: API Key Usage: API Transaction -- Name: ProBotTrading -- Type: Contract Orders + Positions -- IPAccess to API Keys: "All IP's" and click SUBMIT on top right of the page
